**Applications:** Wall panels, door skin, home & office furnitures panel

**Finished:** UV Coating

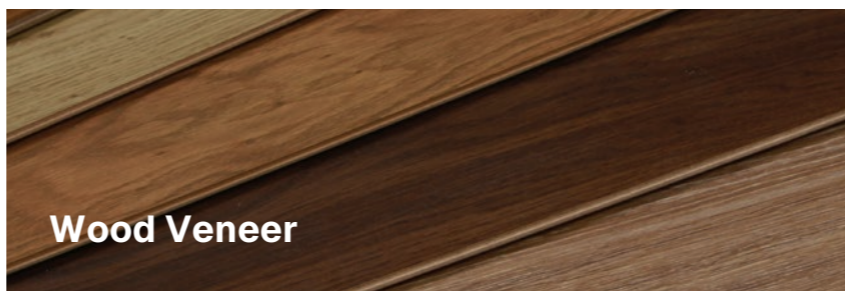

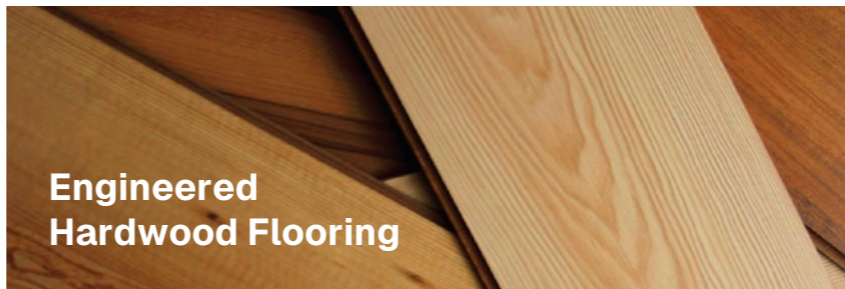

## About Us

LKL Timber Industries Sdn. Bhd. was founded on the belief that working with wood requires care and respect for the material. From the outset, natural wood was regarded not simply as a resource to be processed, but as a material shaped by time and environment.

This belief has continued to guide the way LKL operates over the years, shaping measured production practices and a consistent approach to quality. As the company moves forward, the same perspective remains central to how LKL develops its capabilities, with a clear focus on responsible sourcing, efficient production, and timber solutions designed to endure.

Today, LKL's work is guided by a long-term view of sustainability and craftsmanship. By transforming natural wood into spaces that support living and design, the company continues to collaborate with designers, installers, and builders to deliver timber flooring and wood products defined by precision and responsible use.
